

### Garden

Lili inherited her grandfather's land and wanted to start gardening. Lili's garden size is  $X \times Y$  with various types of plants marked with integer c.

Given a two-dimensional array that contains the type of plant in the garden. Lily wants to make T changes to the garden. For each change made, Lili will plant c in the a-th row of the b-th column of the array. The row and column starts from number 1.

### Format Input

The input consists of integers X and Y followed by an array of  $X \times Y$ , then contains an integer T which is the number of changes made by Lili. The next T line contains three numbers a, b, c which contains the array location index you want to change to the integer c.

## Format Output

The output contains a two dimensional array in the form of a Lili garden plan after a change is made.

#### Constraints

- $\bullet \ 1 \leq a,b,c,X,Y \leq 100$
- $1 \le T \le 1000$

### Secret Code

Lili mewarisi tanah milik kakeknya dan ingin memulai berkebun. Kebun milik Lili berukuran  $X \times Y$  dengan berbagai macam jenis tanaman yang ditandai dengan bilangan bulat c.

Diberikan sebuah array dua dimensi yang berisi jenis tanaman pada kebun tersebut. Lili ingin membuat T buah perubahan pada kebun tersebut. Pada setiap perubahan yang dilakukan, Lili akan menanam tanaman jenis c pada baris ke-a dari kolom ke-b dari array. Diketahui nomor baris dan kolom dimulai dari 1.

### Format Input

Input terdiri dari bilangan bulat X dan Y kemudian diikuti oleh array berukuran  $X \times Y$ , kemudian berisi sebuah bilangan bulat T yang banyaknya perubahan yang dilakukan oleh Lili. T baris berikutnya berisi tiga bilangan a,b,c yang berisi index letak array yang ingin diubah menjadi bilangan bulat c.

## Format Output

Output berisi sebuah array dua dimensi yang berupa denah kebun Lili setelah dilakukan perubahan.

### Constraints

- $1 \le a, b, c, X, Y \le 100$
- $1 \le T \le 1000$
